

Brazil: the best choice for Clinical Trials

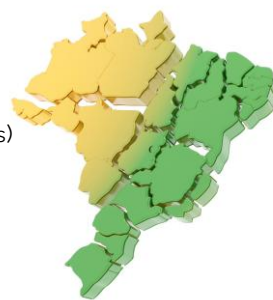

General Characteristics

Brazil is a large country, both in size and in number of inhabitants (>210M inhabitants)

(6th most populous country in the world / 5th largest country in the world (by land area))

Stable economy for over 20 years

9th largest economy (2019, pre-pandemic)

Population

Great ethnic diversity: Brazilian genomes address lack of diversity and have potential for new findings.

500 Years of admixture of Native American, African and European populations.

Largest population of African descent outside of Africa, including admixtures not found in Africa.

Large population

Ethnic diversity

Advanced medical infrastructure

One of the top 10 pharmaceutical markets in the world

Large contingent of trained healthcare professionals and excellent infrastructure in the sector

Excellent infrastructure in **clinical analysis laboratories to support clinical studies and act as central laboratories.**

Health Sector

"The Clinical Research Act"

Brazil's Clinical Research Act (Law 14,874/2024) strengthens an already robust and reliable clinical research environment, with clear roles and responsibilities for all stakeholders. **Sponsors benefit from a predictable, parallel review process: ethical approval within 30 business days and ANVISA regulatory assessment within 90 business days.**

Brazil brings numerous advantages together for conducting clinical studies

Top Universities: 14 Brazilian Universities among the top 20 in Latin America

Scientific publications: top 20 in the world ranking of articles and citations.

Long history of conducting clinical trials since the 1980s

Brazil can be the basis for carrying out multicenter studies in other Latin American countries

Quality and prominence in conducting trials

Competitive costs

Excellent analysis timelines

High standard regulation
